(Model NRD – Non Return Damper)

GENERAL

Non Return Damper is specifically designed to dramatically reduce the back draft of air through air-conditioning ventilation systems.

The dampers materials shall be determined according to the systems proximity to aggressive atmospheres, or its active purpose. Frame design shall be stage and rigid to reduce flex, materials being galvanized steel at a min. 1.2mm thick.

It can be installed inside ductwork, conditioner plenums or in-line flanged ductwork configurations.

Dampers are designed to control airflow not to structurally support the systems ductwork.

All blades individually hinged on stainless steel stub shafts, standard with long life nylon bushes and its blades tips are sealed for quiet operation.
